SLIDE 1 - EXECUTIVE SUMMARY

PROBLEM -LACK OF CUSTOMIZATION AND CREATIVITY

SOLUTION

We create a bitmoji inspired and AI-integrated home try-on filter to find the exact piece of eyewear you are looking for, starting from material, texture, colour, design and even frame accessories like charms, chains, and magnetic convertible brooches.

TARGET CUSTOMER

Our main customers are people looking for accessibility and versatility. You need a very specific accessory for your costume; you have an EYECONIC ; you need a picture-perfect frame for an office shoot; or a daily-wear look you wish to execute that you had in your mind , EYECONIC is here .... We will also have a section for movies where you can access exact frames from your favourite movie or drama.

CORE VALUE PROPOSITIOIN

Convenience at a click. Additionally, we will provide a recycling loop where, if at any point you need frames for a look and don't need them now, you can send the frames back, and we will recycle the material and provide a portion of store credit points.

SLIDE 11 BUSINESS MODEL CANVAS

KEY PARTNERS

Our main goal would be being self seufficient but primarily we have to start with raw materials of basic frames and the other raw materials . The customised parts would be individually manufactured by us. We would like to source the lenses from Crizal to ensure quality. We plan on sourcing the decorative items from quality wholesalers.

KEY ACTIVITIES

Our key goal would be to make the product through artisans and deliver it directly to the customer without any middleman. The complete package, manufactured in EYECONIC, gets shipped directly to your home

KEY RESOURCES

Our key resources would be lenses from CRIZAL, manufacturing our own frames after the order is placed, assembling the whole craft with the help of artisans, and then shipping it to the customers

VALUE PROPOSITION

Our promises would be carefree, accessible, and fast delivery. With an eco-friendly recycling loop that gives us not only convenience and less wastage but also builds trust in quality and management. We get repeat customers through this. .

CUSTOMER RELATIONSHIP

Our stores provide many customisations that cater to the exact needs of every customer. No hassle trying to find it when you can just make it EYECONIC. The recycling loop with store credit not only helps us with raw materials but also builds customer trust in our responsibility and liability.

CHANNELS

After sourcing our lenses and raw materials, we would like to assemble, or rather create, the end product in our factory itself through artisans and then directly ship this to the customers (D2C) brand.

CUSTOMER SEGMENTS

DEMOGRAPHIC: Any gender, any age; we will try to make customizable frames at a pocket-friendly rate to cater to a larger audience.

GEOGRAPHIC: We plan on starting it exclusively in India, then maybe expand larger .

OCCASIONS: We will cover a wide audience... if you are a K-drama fan, you can get the exact frames of the actors for a casual outing, formal meeting, or a wedding. EYECONIC has it all

COST STRUCTURE

EYECONIC would be a cost-driven company; we would like to make it as affordable as possible. The fixed costs include the maintenance of our factory, artisans and machines. Variable costs include raw materials and shipping costs, as we would start manufacturing on demand

REVENUE STREAMS

ASSET SALE: For generic products, we will provide this, but not for custom products.

USAGE FEE: During recycling, you get your money back through store credit points, so only a fraction of your money was used primarily to buy the product.

ADVERTISING FEE: We would like to continue our promotions through social platforms. When we cross a certain milestone, we would like to start doing the same on the bigger television screen
